

junior

adjust[®]

feed the difference

The very fast growth of a foal in its first year (70 to 75% of adult weight at 12 months in a saddle-horse) requires a correct supply of proteins, energy vitamins and minerals essential for bone and muscle growth.

HELP PROMOTE BONE GROWTH

- Ca/P ratio : 1,66
- Total manganese: 120 ppm included 36 ppm chelated form
- Vitamine D3 : 1 600 UI
- Vitamine B5 : 12 ppm
- Choline : 120 ppm

HELP PROMOTE MUSCLE GROWTH

- Lysine : 9 g
- Méthionine + Cystine : 6 g
- Thréonine : 7 g
- Milk proteins: Lactosérum
- Vegetable fat : palm oil
- L-Carnitine : 50 ppm

HELP ENSURE DIGESTIVE SECURITY

- Bioregulators of the intestinal flora :
FOS : Fructo-oligosaccharides
MOS : Mannan-oligosaccharides
- Starch limited to 21 %

HELP PREVENT BONE AND CARTILAGE DISEASE

- W3 : 23 g with 3.5 kg of **junior**
- Total copper: 60 mg included 18 ppm chelated form
- Positive anion-cation balance : 230 meq
- Choline : 120 ppm

HELP PROTECT THE HEART

- Garlic

HELP MAKE THE HOOVES STRONG

- Total zinc : 145 ppm included 43.5 ppm chelated form
- Méthionine + Cystine : 6 g
- Biotin : supply of 13 mg per day with 3.5 kg of **junior**

HELP MAKE THE COAT GLOSSY

- W3 : 23 g with 3.5 kg of **junior** (extruded linseed)

adjust® feed the difference.

junior

Composition

Maize flakes, oat flakes, barley flakes, carrots.

Pellets: soya bean cake, compressed alfalfa, wheat bran, extruded soya beans, powdered whey (lactoserum), extruded linseed, cane molasses, dextrose, palm oil, calcium monohydrogen phosphate, sunflower cake, sodium bicarbonate, magnesium oxide, colza oil, Fructo-oligosaccharides (FOS), Mannan-oligosaccharides (MOS), calcium carbonate, sodium chloride, L-Threonine, L-Lysine monohydrochloride, vitamins, trace elements and L-Carnitine.

Guaranteed analysis per kg

Crude protein (%)	18
Crude lipids (%)	7
Crude ash (Mineral) (%)	9,5
Crude cellulose (%)	9
Moisture (%)	12
Starch (%)	21,6
Sodium (%)	0,4
Magnésium (g)	3,5
Lysine (g)	9
Méthionine + Cystine (g)	6
Thréonine (g)	7
Calcium (g)	12,5
Phosphorus (g)	7,5
Potassium (g)	11

Additives per kg

Vitamine A (UI)	10000
Vitamine D3 (UI)	1600
Vitamine E (UI)	150
Vitamine B1 (mg)	6
Vitamine B2 (mg)	8
Vitamine B6 (mg)	2,5
Vitamine B12 (mg)	0,02
Vitamine B5 (mg)	12
Vitamine C (mg)	50
Niacin (mg)	25
Folic acid (mg)	2,5
Iron (mg)	115
Total manganese* (mg)	120
Total zinc* (mg)	145
Iodine (mg)	0,60
Sélénium (mg)	0,35
Total copper* (mg)	60
Copper sulphate pentahydrate (mg)	40
Choline (mg)	120
Biotin (mg)	3,7
Appetite stimulants and flavourings	Artichoke extract and Garlic extract

vitamin content guaranteed for: 12 months

* included 30% chelated form

Typical nutritional values per kg

Equine forage unit (EFU)	1,10
Equine digestible energy (kcal-Mj)	3520 14,74
Equine digestible nitrogen matter (g)	135

Rations

2 or 3 meals per day for a foal (type saddle horses).

- ⓘ Before WEANING: give very small quantities renewed from the first days of life depending on the mare's milk production
- ⓘ After WEANING: adjust the quantities in relation to forage quantity and quality
- ⓘ Unlimited clean water
- ⓘ If your horse has just started on **junior**, mix it in gradually with the previous feed.
- ⓘ Density: about 470 g/litre
- ⓘ Store in a cool, dry place

Daily ration to be given for foals before weaning

At 1 month	0.5 kg (1 litre)
then 0.5 kg per month of age	
e.g. at 6 months	3 kg (6.4 litres)
Meadow hay	Freely available

Daily ration to be given for foals before weaning

from 6 to 12 months	3 to 4 kg
according to grazing	(6.4 to 8.5 litres)
quality	
Foin de pré	à disposition

All of the proposed rations must be related to the horse's state (health, age, condition), the intensity of physical activity and the nutritive quality of the forage or grazing available.
