HOOF ACTIV REPAIR

C-400

HOOF ACTIV REPAIR is a feed supplement for horses that reinforces horn structure, promotes rapid reconstruction of the hoof, and improves mane and coat condition. This product meets the needs of horses that have difficulty in maintaining horn quality, coat condition, and, more generally, with dander issues.

HOOF ACTIV REPAIR is manufactured using a cold granulation process which maintains the integrity of the compounds in its formula for maximum efficiency.

This innovative product was designed by the Royal Horse team of nutritionists and equine veterinarians who work on developing ever more effective nutritional products for better welfare.

The effectiveness of HOOF ACTIV REPAIR's active ingredients has been demonstrated in the results of a study conducted on horses under real conditions.

HOOF ACTIV REPAIR's properties are based on the combination of two active ingredients: **BIOTIN, COUPLED WITH CHELATED TRACE ELEMENTS, AND PROKERATIN®**, an amino acid complex containing the specific nutrients needed for the hoof to grow.

PROVIDES THE HORSE WITH THE SPECIFIC NUTRIENTS IT NEEDS FOR ITS HOOVES TO GROW

IMPROVES HOOF QUALITY

IMPROVES MANE AND COAT CONDITION

INSTRUCTIONS FOR USE

Administer ideally with the evening ration.

TREATMENT

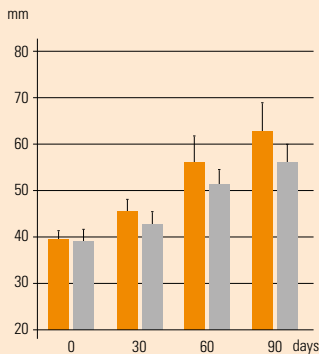

2 doses of 50 g/day for 1 month.
Repeat treatment 2 or 3 times a year.

RECONSTITUTION

2 doses of 50 g/day until hoof wall
is fully repaired.

RESULTS

Measurement of hoof wall re-growth speed between a control group and the group administered C-400.

Hoof growth significantly stimulated by PROKERATIN® supplementation

Quick response on average **+30% of growth** in horses fed the C400 supplement over 90 days*

PROKERATIN®
Control

* in the experimental conditions of our trial.
